## FOR IMMEDIATE RELEASE

### Practical Components' Publishes New 2017 Product Catalog

**LOS ALAMITOS, CA — March 2017**— Practical Components has published their new 2017 product catalog. The Practical Components catalog is designed to help electronics engineers save money while improving their production processes, assists researchers in exploring new emerging technologies and helps technicians test and recertify their skills. This new catalog is aimed at anyone involved in PCB assembly, training, soldering and surface mount technology.

This catalog marks a major revision to the Practical Components catalog. Inside you will find over 20 pages of new products and for the first time much of it is printed in color necessitated by multi-layer components and complicated stack-up interconnects.

The catalog features the latest in cutting-edge component technology, including the largest array of Advanced Test Wafers, Amkor CSPnL and eWLP, CSPs down to .3mm Pitch, TMV PoP, WLP Wafer Chip Packages as well as extensive additions to our Flip Chip selections.

Our kits and boards pages provide tremendous savings and jump-start productivity. Furthermore, inside the catalog, readers will find all the training kits needed to remain at the top of the competition.

“This catalog is still the number one resource for anyone involved in the electronics industry and a must-have in everyone’s production and research arsenal and research,” said Kevin Laphen, President of Practical Components. “Practical Components product guide/catalog provides a wealth of valuable information that will help companies grow quickly and profitably. Just having one on your desk may make you smarter.”

The 2017 Practical Components catalog will be available online and currently accepting orders for the print version at [www.practicalcomponents.com/catalog.htm](http://www.practicalcomponents.com/catalog.htm)
